

Protective Eyewear for IPL Patients & Operators

Intense Pulsed Light (IPL) Systems commonly used for cosmetic applications such as hair removal and skin resurfacing present a hazard to the eyes of both operators and patients alike. We offer a range of options offering protection with the minimum obstruction to the procedures. Further options for patients can be seen on our Patients Eyewear brochure.

IPL Patient Eyewear

IPL Aid

These latex free disposable eyepatches contain a special layer to protect the eye from the light from the IPL system. They allow access to the bridge of the nose and around the eyes. Although easily removed, they remain securely in place during the procedure.

Eyecaps

These stainless steel eyecaps are designed to go under the eyelid leaving the face entirely unobstructed for cosmetic treatments. They come in four sizes.

Size	Order Code (pair of eyecaps with suction cup)
Very small (22 mm)	LV-EC-VS
Small (24 mm)	LV-EC-S
Medium (25.5 mm)	LV-EC-M
Large (26.5 mm)	LV-EC-L

IPL Operator Eyewear

IPL Lightspeed – Detects IPL Operation

This eyewear detects the IPL flash and automatically darkens within 1 millisecond thus protecting the eyesight of the operator. When the IPL is not operating the eyewear provides excellent visibility for the operator. Battery operated.

IPL Flip-Down

A dark green filter can be flipped down for protection during operation of the IPL or flipped up to allow full visibility when not firing.

IPL Shade

9623 Style

Dark green eyewear for protection against the bright light from IPL systems, offered in two frame styles and different ‘Shades’. The higher the Shade number the greater the protection and the lower the visibility.

9162 Style

Frame Style	Shade	Order Code
9623		GL-9623
9162	Shade 3	LV-IPL-3
9162	Shade 5	LV-IPL-5
